SUBJECT INDEX

Achievement tests 348
  domain-specific learning potential 349
Advanced organizer 155
Alternative frames of reference 89
Argumentation skills, university students 175–191
  measuring of 186
Arithmetic, learning potential tests 351
Arithmetic word-problems
  computerized instruction programs, mentally-retarded children 193–215
  mathematical modeling 273–294
Artificial Intelligence, commonsense reasoning 7
Auditory Analysis Test 355
Automation of intellectual operations 297, 299

CITO 199
Cognitive conflict 95
Cognitive load theory 299–311
  element interactivity 303, 307, 310
Cognitive support 155, 161
Commonsense reasoning, motion 7–25
Communication, learning mathematics 124–138
  reflection 136
Concept 117
Concept mapping 255, 258, 265
Conceptional change 117
Conceptions of mathematics 335, 338
Conceptions of science learning and teaching 217–231
Conceptual change, physical sciences 3, 117
  analysing teaching–learning situations 71–87
  capturing and modeling 45–69
  commonsense reasoning, theory of motion 7–25
  reframing the problem 89–111
  theory of 27–43
Conceptual framework 97
Consistency, science concepts 37, 51
Constraint-Based Interactions 31, 33, 34, 41
Constructivism 47
Context cues 141
Creativity, motivation and learning 249
Critical thinking skills 176
Cues 141

Darwinian theory of evolution 104
Day/night cycle, children's explanations 56
Decimals 133
Deep processing
  instruction effects 156, 160, 161, 164, 171
  study strategies in a search task 165, 170, 171
Detailed learning/recall 264, 266
Development, psychologic of motion 13–20
Diagnosis, cognitive effects of practical experience 318, 320
Diagnostic tests 349
Disequilibrium 95
Domain-specific learning potential tests 349
  arithmetic 351
  reading 352
Dynamic Phoneme Segmentation Test 354

Earth, childhood concepts 52
Elaborative interrogation 139–149
  encoding 141
  retrieval 144
Element interactivity 303
  cognitive load 307, 310
  theoretical and instructional consequences 310
Encoding, elaborative interrogation 140, 141
Epistemological analysis, evolution of physics 72
Equilibration 95
Evolution, Darwinian theory 104
Exam preparation task, learning style and instruction effect 155
External-Modelling instruction 196, 198, 205, 209, 211

Factorization 129
Field of applicability 82
Force, concept of 7, 59
Formative tests 348
Framework theory of physics 47
Free-Representation Test 197, 203, 211

Generative processing 254, 258
Group work, mathematics 126

Hayes' Naive Physics Manifesto 8
Heat, concept of 61
Heredity in genetics 104
Higher education, conceptions of learning and teaching 217–231
Hypertext reading environment, learning styles 154–174

Incompatibility Hypothesis 28, 33–42
Information processing 153
Instruction, learning styles 154, 155–164, 172
Integrating information 257

Internal consistency, test of 51
Item Response Theory 358

Knowledge encapsulation 314
Knowledge in pieces 64
Knowledge structure 78

Learner's modeling of physics world 75
Learning
  conception of and approach to 332–344
  conceptual change 82
  elaborative interrogation 139
  facilitating 299
  function 298
  mathematics 331–345
  mechanisms 296
  motivation 233–251
  phenomenographic perspective 217–231, 332, 342
  reflection and communication 124
  study strategies 253–271
  teachers conceptions of 217–220, 226
Learning difficulties, physics teaching 71–87
Learning disabled
  arithmetic word-problem instruction 193–215
  motivation and learning 234, 235, 248
Learning failures 49
Learning goal 130, 133, 134
Learning potential assessment 347
  domain-specific tasks 349
    arithmetic 511
    reading 352
Learning styles 153
  instructional support 152, 155–164
  study strategies 152, 165–171
Lexical cues 141

Mathematical modeling, arithmetic word problems 273–294
Mathematics
  reflection, communication and learning 123–138
  students' conceptions 331–345
Matter, conceptual change 28, 39
Means-ends analysis 299, 309
Medical students, cognitive effects of practical experience 313–329
Memory 256, 257, 299
Memory organization 146
Memory task 140
Memory tests 356
Mental models 48, 52, 53, 57
Mental representations 256, 267
Mentally-retarded children, computerized instruction programs for arithmetic word-problem solving 193–215
Metacognitive instruction, learning style 155, 160, 164
Metaconceptual awareness 67
Misconceptions 32, 64
Motion, theory of 7–25
Motivation, multiability, multicultural classrooms and tasks 233–251
Multiability, multicultural classrooms, motivation and learning 233–250
Multiplication, reflection and communication 126

Nativism 47
Note-taking, study strategies 255, 258

Organism, concept of 99

Paired-associate learning 304
Persistency, science concepts 37
Phenomenography, conceptions of learning and teaching 217–231, 332–344
Physical sciences, conceptual change 3
  analysing teaching–learning situations 71–87
  capturing and modeling 45–69
  reframing the problem 89–111
  theory of 27–43
  theory of motion 7–25
Physics
  epistemological analysis of evolution 72
  modeling in 74
  naive framework theory 47
Practical experience, cognitive effects 313–329
Predicates, science concepts 39
Prior knowledge, elaborative interrogation 140
Problem solving
  facilitating learning 299
  mentally-retarded children 194
  realistic mathematical modeling 273–294
Processes, conceptual change 28, 40
Prototypes, motion 11

RAKIT 352
Readiness tests 348, 351
Reading-Behaviour Test 197, 202
Reading, learning potential tests 352
Reading situations 153
Realistic mathematical modeling 273–294
Reasoning 175, 189
  motion 7–25
Reconstructive processes, study strategies 267
Reflection, learning mathematics 124, 136
Repetition 144
Retrieval, elaborative interrogation 140, 144
Robustness, science concepts 36

Scaffold 129
Schemas
  acquisition 296, 299
  elaborative interrogation 141, 146
  elements 305
Science
  commonsense accounts of motion 8
  conceptions of learning and teaching 217–231
  philosophy of as a basis for norms about instruction 90
  theory of conceptual change 27–43
Search task, learning styles and study strategies 165
Selective attention 257
Selectivity, learning styles 170, 171, 172

Self-regulation, learning style 167, 170
Sequence of Sets Test 351
Situation model 256, 267
Split-attention effect 308
Strategy training 172
Study strategies
  elaborative interrogation 139–148
  learning from text 253–271
  learning styles in a search task 165
  text books 151–174
Summative test 349
Surface memory 256, 257
Surface processing
  instruction effects 156, 160, 162, 164, 171
  study strategies in a search task 165, 171
Synthetic mental models 53

Task-research perspective, motivation and learning 235
Teachers, conceptions of learning and teaching 217–231
Teaching
  mathematics 344
  science, conceptions of 217, 223, 227
Teaching–learning, modeling as a basis for analysing 71–87
Text-Analysis training 195, 198, 205, 209, 211
Textbase 256, 257, 267
Textbooks, study strategies 151
Text-comprehension 151
  mentally-retarded children 194–214
Training-based assessment of school achievement 347–360

Underlining, study strategies 254, 258, 265
University students
  argumentation skills 175–191
  conceptions of mathematics 331–345
  elaborative interrogation 139–149
  study strategies 151–174
University teaching staff, conceptions of science learning and teaching 217–231

Word problems
  mathematical modeling 273–294
  solving by mentally-retarded children 193–215
Word-Problem Test 199
Working memory 299
Working memory tests 355

Printed and bound in Great Britain by Nuffield Press Ltd
